

Clinic Connect[®]

Comprehensive
nursing support for
intrathecal pump
patients in your clinic

AIS Healthcare
Targeted Drug Delivery

Advancing quality.
Improving lives.

What does Clinic Connect® offer?

An experienced AIS Healthcare nurse specializing in intrathecal pump management who will seamlessly integrate with your team. Under physician oversight, a Clinic Connect nurse can manage:

- ✓ Pump refills
- ✓ Standard and complex programming
- ✓ Scheduling visits for pump patients
- ✓ Ordering medication
- ✓ Documenting care in an electronic health record (EHR) system
- ✓ Obtaining labs for compliance testing
- ✓ Care coordination
- ✓ Other tasks based on clinical needs

How does Clinic Connect work?

AIS Healthcare provides one of our trained targeted drug delivery (TDD) nurses at fair market value who can work alongside a provider's clinic to service the patient, most importantly:

- ✓ All services conducted under physician supervision and in collaboration with the nursing team
- ✓ Allows the provider to bill for all patient visits and procedures performed in their office. However, AIS will continue to bill a patient's insurance for the patient-specific medication
- ✓ All reports and records housed at clinic for easy reference
- ✓ AIS Healthcare carries liability for nursing services and pump-related procedures
- ✓ AIS invoices covering nursing care and administrative time are sent monthly to physician and designated staff. Option to pay invoices by credit card is now available

"The AIS Clinic Connect Program allows me to provide high quality care for my pain pump patients while allowing me to do other essential duties needed to run my clinic efficiently."

Denis G. Patterson, DO

President, Nevada Advanced Pain Specialists
